ErgoSoft presents new RIP software v.2008

Altnau, Switzerland (March 5th, 2008) After one and half a year of intense development, the implementation of many suggestions from customers and concentrated beta-test period, the new, completely revised ErgoSoft RIP software v.2008 is available since the beginning of March. The new RIP software is developed for applications like Fine Art Printing, LFP, sublimation, flag&banner, sign making, digital textile printing and much more.

The well known qualities of the ErgoSoft RIP software such as the intuitive user interface and usability have been enhanced and enlarged with new functions to continue to increase the productivity and flexibility of the ErgoSoft software. With the integration of Multi Core CPU technology the RIP process has been accelerated. The time required to RIP the data on modern systems is half as long as in the previous version. The known production tool JobQueueViewer that gives the user a summary of the current print information, as been extended to the new JobCenter and allows now a fast overview of the status of the printer, cutter and the RIP: what is the state of the ripping process, what are the other print jobs doing at the printer and how much of their job did the cutters already finished? A new JobTicket function gives detailed information about every job and enables you to recall this information later again. The new developed PrintClient allows on the fly changes of print parameters to optimize the printer settings like the number of passes, uni- or bidirectional printing, and changing the temperature at the printer heating. It is also possible to print white ink and spot colors.

With the introduction of a new feature to estimate the costs the users has a detailed information about the price of this job and therefore can use this information for further price quotes. Furthermore, the Postscript support is enhanced.

With the help of the optional additions, the modularly developed ErgoSoft RIP v.2008 can be customized to the users needs and grow with the user's business success. Therefore optional functions such as "Variable Data" are available. This function can be used to print e.g. sport-shirts having all the same pattern but with different numbers or names on or. Or the user prints advertisement posters with different picture and text but with the same pattern and company logo.

"With our products, once again ErgoSoft sets the standard for RIP programs in terms of user friendliness, quality and productivity" said Mr. Hans-Peter Tobler during the internal presentation of the new RIP software family. The new ErgoSoft products StudioPrint v.2008, PosterPrint v.2008, TexPrint v.2008 and ColorGPS v.2008 are exclusively distributed by selected resellers all over the world.

About ErgoSoft

ErgoSoft is a leading developer of RIP Software for the high-end digital printing community. The company's mission is to provide easy to use, high-fidelity digital printing solutions to demanding imaging professionals. ErgoSoft's comprehensive line of the inkjet RIPs StudioPrint v.2008, PosterPrint v.2008, TexPrint v.2008 and the profiling tool ColorGPS v.2008 are designed to meet the unique requirements of Fine Art, Photography, Large Format Display, Textile, and Sublimation. ErgoSoft achieves this by developing feature-specific, production-oriented applications which optimize image fidelity, color accuracy, and production speed in the most demanding digital printing environments. ErgoSoft AG has been developing software for the graphic industries since 1980, and it entered the RIP software market in 1993. It has since become one of the most recognizable names in the market. The company is headquartered in Altnau, Switzerland and has a North American office in Nashua, NH, and an Asian office in Hong Kong.
